

# Draw a Crow/Raven

Use the steps below to draw your bird. Refer to photographs to make your bird look more like a crow or a raven. Crows have beaks that are more triangular, while ravens have a more robust and curved beak. Ravens also tend to be scruffier around the bill and neck.

*Ravens are one of the smartest animals, often considered smarter than many mammals, and possess problem solving skills that are similar to a 5 yr. old human.*

*Ravens and crows can recognize people's faces, and they can talk to each other just like you do— using raven and crow sounds, of course.*

*Ravens are larger than crows, with wingspans of 3-4 feet, compared with a crow's wingspan of closer to 2 feet. Ravens are more often found alone or in pairs in rural and wilderness areas, while crows are more often found in groups in urban areas.*
